
What is a Logistic Park?

- A logistics park is a development concept in which distribution centers typically seen in a suburban area are built in a park like setting, created by landscaping.
- Intermodal facility where truck trailers and containers are transferred between trains and trucks.
 - It is **not** a rail switching yard.
- Logistics parks are a relatively new design concept that have been utilized by major organizations as a means to efficiently and effectively organize, manage, and ship goods.
